\***Доменные коллизии** — возможное последствие использования названий новых доменов верхнего уровня в локальных (например, внутрикорпоративных) сетях, приводящее к некорректной работе сетевых ресурсов у отдельных категорий пользователей. Доменные имена, активация которых в новых доменах верхнего уровня может приводить к доменным коллизиям, по

требованию корпорации ICANN, управляющей адресным пространством сети Интернет, были недоступны для регистрации до устранения причин коллизий. Более подробная информация о доменных коллизиях представлена [на сайте ICANN](#).
